Frontend Engineer | pratikpatidar7990@gmail.com | +91-8269647990 | linkedin.com/in/pratik-patidar | github.com/pratik-patidar

PROFESSIONAL SUMMARY

Frontend Engineer with over a year of experience focusing on performance-critical interfaces. I prioritize vanilla JavaScript fundamentals—closures, event delegation, and async patterns—before layering on frameworks. My work centers on building predictable state architectures and ensuring UI stability in high-concurrency environments.

TECHNICAL SKILLS

- **Core Engineering:** JavaScript (ES6+), TypeScript (Interface-driven development), HTML5, CSS3, DOM manipulation.
- **Frameworks & Architecture:** React, Next.js, SvelteKit.
- **State & Data:** Redux Toolkit (isolated re-renders), Svelte Stores, Zod schema validation.
- **Tooling & Performance:** Vite/Webpack configuration, code-splitting strategies, bundle optimization.
- **Integration:** RESTful APIs, WebSocket event handling, JWT-based authentication.

PROFESSIONAL EXPERIENCE

Frontend Engineer | Techstuff Private Limited | Feb 2025 – Present

Tech Stack: SvelteKit, TypeScript, Tailwind CSS

- **Rendering Optimization:** Debugged and resolved layout stutters in data-dense tables by auditing component lifecycles and eliminating unnecessary re-paints. Shifted heavy computations out of the main thread to keep UI interactions responsive under load.
- **State Architecture:** Replaced loose state patterns with atomic transactions using Svelte Stores. This eliminated race conditions during rapid data stream updates and ensured the UI state always mirrors the source of truth.
- **Performance Engineering:** Reduced Time-to-Interactive (TTI) by 35% through aggressive code-splitting at route boundaries. Optimized asset delivery via Vite to minimize payload size for low-bandwidth connections.
- **Component Modularity:** Built a library of reusable, semantic UI components. Focused on CSS containment and DOM simplicity to ensure visual stability even as dashboard complexity scales.

- **API Integration:** Implemented custom WebSocket handlers to manage real-time status updates, ensuring efficient event delegation and graceful degradation when API latency spikes.

KEY PROJECTS

Recruitment Scheduling Dashboard

Tech Stack: Next.js, TypeScript

- **Data Handling:** Architected a scheduling grid designed to manage large datasets. Implemented memoization and virtualization techniques to ensure seamless scrolling and sorting without frame drops.
- **Type Safety:** Applied strict TypeScript interfaces across the entire data pipeline, effectively catching potential runtime failures before they hit the user's browser.
- **UI Stability:** Managed complex state transactions to support concurrent user actions. Ensured that real-time status updates are batched properly, preventing UI flickering and maintaining layout integrity during high-frequency events.

EDUCATION

Bachelor of Technology, Computer Science & Engineering

Barkatullah University, Bhopal | 2020–2024 | CGPA: 7.89

ADDITIONAL INFORMATION

- **Languages:** English, Hindi.
- **Focus:** Building efficient, minimal codebases and performance engineering for web interfaces.
